

Storm Water Permits for

CONSTRUCTION ACTIVITIES

Planning and permitting requirements exist for construction activities. These requirements are intended to minimize stormwater pollutants leaving construction sites

City ordinances may require Erosion and Sediment Control Plans for specific construction sites.

“Knowing your requirements before starting a project and following them during construction can save you time and money.”

The National Pollutant Discharge Elimination System (NPDES) Permit Program requires that construction activities disturbing areas greater than one acre submit for coverage under a general NPDES permit.

Knowing your requirements before starting a project and following them during construction can save you time and money, and demonstrate that you are a partner in improving our community’s quality of life. For more information, please contact the city or visit the city’s website.
